

CONVERTING AUDIO FORMATS

Take the 5 songs that will be given to you in WAV format. Save them in a folder called Ej_Conversion inside your unit folder and convert them to MP3.

You must use a different bitrate for each song, according to this table below. Calculate the final size of each file, and then write the real size next to it..

	Calculated theoretical size (in MB)	Real size (in MB)
Song 1 (4:11 min, 64 kbps)		
Song 2 (5:45 min, 96 kbps)		
Song 3 (4:38 min, 128 kbps)		
Song 4 (5:52 min, 192 kbps)		
Song 5 (5:07 min, 256 kbps)		

Save each file with the same name than the original (but with MP3 extension) in the same folder.
