

MORE EXERCISES WITH GIMP

Download the image **mujer.jpg** in a folder called **Woman**, into your unit folder. We are going to make two changes to this image:

The first one is to delete the wrinkles (arrugas) in her eyes, so she will look younger. You must get something similar to the image on the right:

Then, we are going to use layers to change the colour of her eyes

To do this, create a new, transparent layer (place it upon the photo). Create a green circle upon her eyes. Then, to join these circles with the eyes, change the *Mode* of this new layer to **Overlay** (solapar).

Save your work as **mujer2.xcf** in the same folder.
