

## CALCULATIONS WITH SEVERAL OPERATORS

---

Create a new OO-Calc document and save it as **FormulasOperadores**. Write a formula in column E (inside each grey cell) to do the corresponding operation on the left (column D).

	A	B	C	D	E	F
1	<b>Datos</b>			<b>Operaciones</b>	<b>Fórmulas</b>	
2						
3	x	6		$x \cdot y + z$	5	
4	y	3		$x - (y + z)$	1	
5	z	2		$x / y^z$	4	
6				$x / (y^z)$	1	

Note that values x, y and z are in column B. So if you want to calculate, for instance, the formula in E3, you must write this formula:

$$=B3 \cdot B4 + B5$$

Fill the rest of the formulas (E4 to E6) on your own, and check that your results are correct.
